An engineer must configure the zone to connect to an Expressway-E using Single NIC with NAT. The internal IP address is 192.168.10.63, and the NAT address is 203.0.113.5. What must the engineer configure on the Expressway-C to meet this requirement?

A. traversal zone with the peer address 192.168.10.63

B. neighbor zone with the peer address 192.168.10.63

C. traversal zone with the peer address of 203.0.113.5

D. neighbor zone with the peer address of 203.0.113.5

Correct Answer: C

Note - You must enter the FQDN of the Expressway-E, as it is seen from outside the network, as the peer address on the Expressway-C\\'s secure traversal zone. The reason for this is that in static NAT mode, the Expressway-E requests that incoming signaling and media traffic should be sent to its external FQDN, rather than its private name.

This also means that the external fifirewall must allow traffic from the Expressway-C to the Expressway-E\\'s external FQDN. This is known as NAT reflection, and may not be supported by all types of fifififirewalls.
